Assignment Tracking Program for Students

1) Practicality
- The program is highly practical for any type of students, from high school students to graduate students.
- Students are often overwhelmed by the amount of assignments they are assigned, so it would be efficient to have a tracking program.

2) Applicability
- The program is applicable to students on a daily basis, especially during their exam weeks in order to track their progress on study materials.
- This type of program can be very user-friendly, whereby users can change their settings to their preference.
- Some assignments often require collaboration (team projects), long-term work (writing assignments), and multiple parts(art projects). It could be very useful to create a program that takes these different factors into consideration.

3) Implementation
- Compared to other programs, this program is relatively easy and straightforward to implement as a software.
- The components required for the program are deadline date, user input for the assignment information, and the progress information.

4) Target Crowd
- The target crowd for this program is not limited to a niche group, but addresses the common problems that the majority of students share.
- For students who are majoring in Art and STEM, this program can be more helpful, considering that they have long-term research projects and assignments.
- For student who are majoring in humanities and social sciences, they can use the program to track their progress on their reading and writing assignments.
