CS 251
Project Proposal

Shan Chen, David Gruba, Henning Tonko

We have one major idea right now with a backup idea. [1]

– In our school, the student activities are not always well advertised, so we want to make an online form that any current St. Olaf students can access and post activities on. It will store all the input for the current week and send it automatically to the *stolaf* alias so that everyone is better informed about what is going on on campus.

The major concepts are:

1. Creating a presentable, easy to use online form that allows for user input

2. Storing the data for the week

3. Compiling and automatically sending out the email

The foreseeable problems[2] are:

1. Removing Duplicates

2. Preventing Profanity

3. Having a location to store all of the data, figuring out what to do with it after the email is sent (do we want to keep a copy?)

---

[1]Backup Idea: Making a pizza ordering program online for pause to receive orders from St. Olaf students.

[2]extensions to the project
